identifying and isolating metants of attinomorphics and for identifying compounds that have antibiotic activity. The method is used to identify metants of microogranisms, prefeably. The method is used to identify metants of microogranisms, professely an evitinomorphic such as M. tuberculosis, M. buylar, M. avitinomorphic conditions. M. paratheberculosis, M. buylar, M. avitinomorphic specific conditions. It is especially useful for identifying joe under specific conditions. It is especially useful for identifying joe understoodled by a generally. It can screen inhorate such as screen multiple libraries concurrently. It can screen inhorate such as predafting the produced by a gene which is disrupted by the insertion of the 18 1096 transposon to produce an attenuated mutant of Mycobacterium whenever.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is given in a specification relating to a method for screening a library with insertions in genes and/or regulatory sections of the organisms of interest, where the insertion contains a cog and/or transposen associated with a teg. The mutants are identified by a hybridisation of the tags to known sequences. The method is useful for treating an individual suffering from a mycobacterial infection, suspected of being infected with a Mycobacterial, which which been exposed to an infectious Mycobacterium. It is a also useful for identifiant of the infectious Mycobacterium. It is a also useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Example 8; Fig 5A; 159pp; English.

New isolated nucleic acid genes from Drosophila and detection reagent for detecting 1000 or more for elucidating cell signalling and cell-cell

Disclosure; SEQ ID NO 20073; 21pp + Sequence Listing; English

The invention relates to an isolated nucleic acid detection reagent

                                                                                                                           capable of detecting 1000 or more genee from Drosophila. The inventue that in developmental biology and in elucidating cell signaling cell-cell interactions in higher enkaryotes for the development of insecticides, therapeatics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLAST-G-BAIDST), expressed DNA sequences (ABLAST-G-BAIDST), expressed DNA (ABBAST-33-ABD72073).
                                                           The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                          The invention relates to an isolated nucleic acid detection reagent
                                                                                                                                                                                                                                                                                                                                                             Disclosure; SEQ ID NO 16890; 21pp + Sequence Listing; English
                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Drosophila melanogaster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Drosophila; developmental biology; cell signalling; insecticide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental blology and in elucidating cell signalling and cell-coall interactions in higher entaryotes for the development of inserticides, therapeutics and pharmscentical dups. The invention disciouse genomic DNA sequences (AELJSITO-ABLJOSIL), expressed DNA sequences (AELJSITO-ABLJOSIL), expressed DNA sequences (AELJSITO-ABLJOSIL).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (PEKE ) PE CORP NY

                                                                                                                                                                                                                                                                                                                                                                         (Wi) gene sequences from antibodies against Bacillus antiración spores. The antibodies are produced by different hybridomas. The specification describes monoclonal antibodies (specially 1968) antibodies) which are highly specific and can discriminate between the spores of the Bacillus Sanily. The antibodies are produced by exposing mice to Bacillus spores. The humoral immune response to Bacillus spores shows a conservation of W gene usage which is distinct for each spore, birding tragments derived from the antibodies are also capable of the bacillus spores in the interval of the spores. The humoral things the spore capable of the spore of the spor

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention provides human breast specific coding sequences and proteins. These are useful for detecting breast tissue and for detecting and treating breast cancer and other breast diseases. The present sequence is a breast specific polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel breast-specific polypeptides and polymucleotides encoding polypeptide, useful for identifying, disgnosting, monitoring, staging, imaging and treating breast cancer and non-cancerous disease states in

```
New isolated polynucleotides and encoded polypoptides - used to develop products for treating e.g. inflammatory diseases, infections, immunological disorders, autoimmune diseases, aller
       allergies
```

12A-12D; 120pp; English

This is the maino acid sequence of the cDNA clone Bc1-like (HACT29), used in the method of the invention. The products of the clone can be used for treating conditions associated with abnormal expression of the polymerides. They can be used for e.g. treating chronic behalf of the polymerides. They can be used for e.g. treating chromic diseases, inflammatory diseases, various allergies, and as anti-lifectious agents. The products can also be used for detection and dispossis.

Competition relates to an isolated protein that is one of 186 human competition to the protein of the man competition to accorded by one of the protein of the protein is used condition of the protein is used condition in a pharmaceutical compestion used to prevent treat or ameliorate a condition in e.g. humans, mice, rabbits, goats, horses, dats, condition in e.g. humans, mice, rabbits, goats, horses, dats, condition in e.g. humans, mice, rabbits, goats, horses, dats, condition in e.g. humans, mice, rabbits, goats, horses, dats, condition in e.g. humans, mice, rabbits, goats, horses, dats, condition in e.g. humans, mice, rabbits, goats, horses, dats, condition in e.g. humans of the breast or liver, cardiovascular disorders e.g. cardatal ischammia, condition caused by bacteria, viruses and fungi and ocular disorders e.g. Albainers of disease, conditions caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection. The polypeptides can alab be used as a food additive or preservative to components of maintain organic backwards and other untrilional components of the present sequence represents one of the movel human corrected proteins of the inventions caused to be conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               22-AUG-1997;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       REXXECTION OF THE PROPERTY OF 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to isolated polymucleotide (I) and coplymeriae (II) sequences (II) is useful as phyticial station probes, polymeriae chain reaction (PRR) primers, oligomers, and for chromosome copulymeriaes chain reaction (PRR) primers, oligomers, and for chromosome copulymicleotides are also used in disposition as expressed sequence tags for identifying expressed genes, (I) is useful an interest the expressed primers (I) is useful for generating antibodies against it, detecting or (III). (III) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical companies involving abstrant process expression or biological activity. It is not the polypeptide and polymucleotide sequences have applications in the polypeptide and polymucleotide sequences and of materiors and composition of materiors. Account of the polypeptide and polymucleotide sequences in the printed composition and assume the sequence data for this patent did not appear in the printed of specification, but was obtained in electronic format directly from MIPO or from the polyment of the printed of the property of the printed of the property in the polyment of the printed of the property of the printed of the property in the printed of the property of the printed of the property in the printed of the property of the printed of the property of the property in the printed of the property of the property of the property of the printed of the property of the printed of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           OM protein - protein search, using sw model
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   seq length: 0

               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Score
